

## Amazon Web Services vs. Microsoft Azure

# TWO CLOUD PLATFORMS IN COMPARISON

## WHICH FAAS PLATFORM IS SUITABLE FOR MY APPLICATION?

You have decided that you want to solve your use case using cloud technologies and are certain that the **appropriate service of FaaS (Function as a Service)** will be suitable. You are now faced with the decision concerning **which provider is the right one for you**. This decision is strongly dependent on the type of problem that the FaaS should solve. Common questions that are important in this context include:

- Do requests tend to arrive with a long time lag?
- Do many or few requests tend to arrive?
- Do parallel requests have to be dealt with?

This platform comparison provides you with a selection of criteria that you can use to compare in a qualified manner to ultimately choose the suitable provider.
